XEOX by hs²n

**Structured and central administration of
entire IT infrastructures**

With XEOX hs²n realized a product to simplify IT administration and therefore freeing up time for higher qualified tasks. This integrated IT management cockpit does not only administer hardware, software and networks, it provides extensive user management, software rollouts and central databases including licence management, asset management, inventory, call tracking as well as detailed accounting for IT services.

Instead of many different software products for controlling and managing IT infrastructures, XEOX combines different modules into one central, powerful tool - like a Swiss army knife.

hs²n Informationstechnologie GmbH provides extensive IT services for individual software development, consulting and IT operations. Special areas of expertise of this company, which was founded in 2001, are integrated solutions that are optimally adapted to the client's requirements as well as extensive support for IT environments.
